

Stay safe at home with Andi

Andi calls for help in an emergency.

Andi calls the alarm receiving centre so you can communicate with an operator to get help if you're in trouble.

Andi keeps you connected and online.

Andi connects to the internet via SIM, Ethernet and Wi-Fi and Andi switches between these to find the strongest connection.

Andi connects to sensors you know and love.

Andi can connect to any sensor type, this means you can keep using the sensors you have today and use Andi in the future, even if your needs change.

Andi keeps you safe with preventative care.

Andi spots small but significant changes which may indicate you are starting to get sick so you can get help earlier.

Digital, round the clock, telecare that...

- Helps in an emergency.
- Protects your independence.
- Stays with you, even if your needs change.
